

CATHARINA AKEMI CHAGAS CRUZ LISBAO

Junior Cybersecurity & GRC Analyst | Compliance | Information Security

bao.akemi@gmail.com | +55 17 99723-1095 | [catharina-akemi.github.io](https://github.com/catharina-akemi) | linkedin.com/in/catharina-akemi

PROFESSIONAL SUMMARY

Entry-level Cybersecurity & GRC professional transitioning into IT, backed by postgraduate studies in Cybersecurity & Cybercrime, Software Architecture, and Data Security. Builds practical network security tooling in Python and PowerShell (packet capture, anomaly detection, port scanning, network range analysis) and conducts self-directed security reviews of own codebases. Prior background in languages, translation, and education contributes strong technical writing, cross-cultural communication, and attention to detail — valuable for compliance documentation, security questionnaires, and internationally-facing teams.

TECHNICAL SKILLS

- Security & GRC: SOC 2, ISO 27001, CIA Triad, MFA, Least Privilege, Encryption vs. Hashing, Compliance Automation, Security Questionnaires
- Scripting & Tooling: Python (scapy, pandas, scikit-learn), PowerShell, packet capture, anomaly detection, port scanning, CIDR range enumeration, reverse DNS lookup, Kali Linux

LANGUAGES & COMMUNICATION

- Native Brazilian Portuguese; C2 English; Advanced Italian
- 5+ years of translation, writing, and editing experience — strong foundation for localization, technical documentation, and international client-facing roles

PORTFOLIO PROJECTS

Network Security Tooling | Independent Project

- Built a Python packet capture tool (scapy, pandas) with machine-learning anomaly detection (scikit-learn)
- Developed a multithreaded Python port scanner and a CIDR-range network scanner
- Wrote and debugged a PowerShell script for IP enumeration, host ping checks, and reverse DNS lookup
- Built a modular SOAR automation tool in Python (standard library) with a scoring engine, playbook registry, and audit trail
- Conducted a self-directed security audit of own GitHub repositories; identified and remediated a hardcoded-credential exposure

Phishing Website Detector | Independent Project

- Built a machine learning web application (Python, scikit-learn, NLTK, Flask) that classifies URLs as phishing or legitimate using NLP text analysis, achieving ~96% accuracy
- Applied tokenization, stemming, and text vectorization to preprocess and engineer features from raw URL data
- Deployed a custom Flask front-end for real-time URL scanning and published the project to GitHub with full documentation

CERTIFICATIONS

- Cybersecurity Analyst: From Zero to Kali Linux (Ethical Hacking) - Udemy, 2026
- Cybersecurity Essentials (LFC108) - The Linux Foundation, 2026

PROFESSIONAL EXPERIENCE

Municipal School Teacher | Municipal Public School System, Brazil — 03/2025 – 03/2026

- Planned and delivered lessons for diverse classrooms, adapting materials to varied learning needs
- Communicated with students, families, and staff, coordinating logistics and documentation across stakeholders

Assistant Teacher | Maple Bear Bilingual School — 01/2023 - 12/2024

- Delivered bilingual (English/Portuguese) instruction in an international education environment
- Supported classroom management and coordinated with lead teachers on lesson planning and student progress tracking

Translator / Writer / Editor | Freelance — 2019 - Present

- Delivered translation, writing, and editing services across professional and technical contexts for international clients

EDUCATION

- Postgraduate Studies - Cybersecurity & Cybercrime, Instituto Univirtua, 2025
- Postgraduate Studies - Software Architecture, Instituto Univirtua, 2025
- Postgraduate Studies - Data Security, Instituto Univirtua, 2025
- B.A. in Languages (Letras), Unesp Ibilce, 2023
